VENATIC CARBON SPECS

The all new Venatic Carbon is perfect for the extreme backcountry hunter. Designed for the ultra-lightweight hunter, the stock is an iota EKO in a different internal configuration than the standard EKO that has been specifically inletted and built just for this rifle. Featuring thumb detents, a long grip, and the industry's most popular Arca-Swiss rail, the Venatic Carbon also includes other premium build components hand-picked by our designers and long-range hunting enthusiasts including the newly released Stiller Wombat action, premium fluted carbon barrel and TriggerTech trigger. This rifle is available in a variety of the industry's most popular caliber options.
